  - merci à Benoit Combemale / Arnaud Blouin pour leurs supports
- Je suis enseignant-chercheur en génie logiciel / software engineering (équipe DiverSE, IRISA/Inria)
  - Comment modéliser et programmer des variantes d'un système (Linux, configurateur Web, générateur vidéo, etc.) ?

# Objectifs de MDI

- Méthodes de développement industriel (MDI)
  - En fait: génie logiciel / software engineering
  - Comment développer des systèmes logiciels de plus en plus complexe?
- #1 Prendre conscience de la complexité des systèmes logiciels actuels et à venir
  - Les enjeux et l'impact sur le métier
- #2 Modélisation
  - UML, feature model, SysML
- #3 Design patterns, refactoring, test
  - OO avancé
- #4 Méthodes

# Modalités d'Evaluation

- Note de TP (40%)
  - Implémentation de design patterns et refactoring d'un système +/- complexe
  - Binôme
- Contrôle continu (60%)
  - 2 notes au cours des TDs ou CMs
  - Questions de cours + exercices
    - UML
    - Design patterns

# Avant d'attaquer...

- Pré-requis
  - programmation
  - programmation orienté objet (Java)
- Idéalement
  - modélisation
  - expérience de développement
  - connaissances de techniques de génie logiciel (test)

# Quizz Time

- Do you know Java?
- Do you know UML?
- Do you know design patterns?
- Do you know testing?
- What is the size of the largest program you developed?
  - (in lines of code: 100? 1000? 10000? X?)
- Have you been involved in an open source project?

## Report: Healthcare website failed test ahead of rollout

By **Ed Payne**, **Matt Smith** and **Tom Cohen**, CNN

October 23, 2013 -- Updated 0103 GMT (0903 HKT)

### Report: Obamacare site failed early test

#### STORY HIGHLIGHTS

- **NEW:** Top White House official part of "tech surge" on Obamacare
- Obamacare "is not failing" despite website woes, White House spokesman says
- Obama says HealthCare.gov problems are "going to get fixed"
- Secretary Sebelius expected to testify at a congressional hearing next week

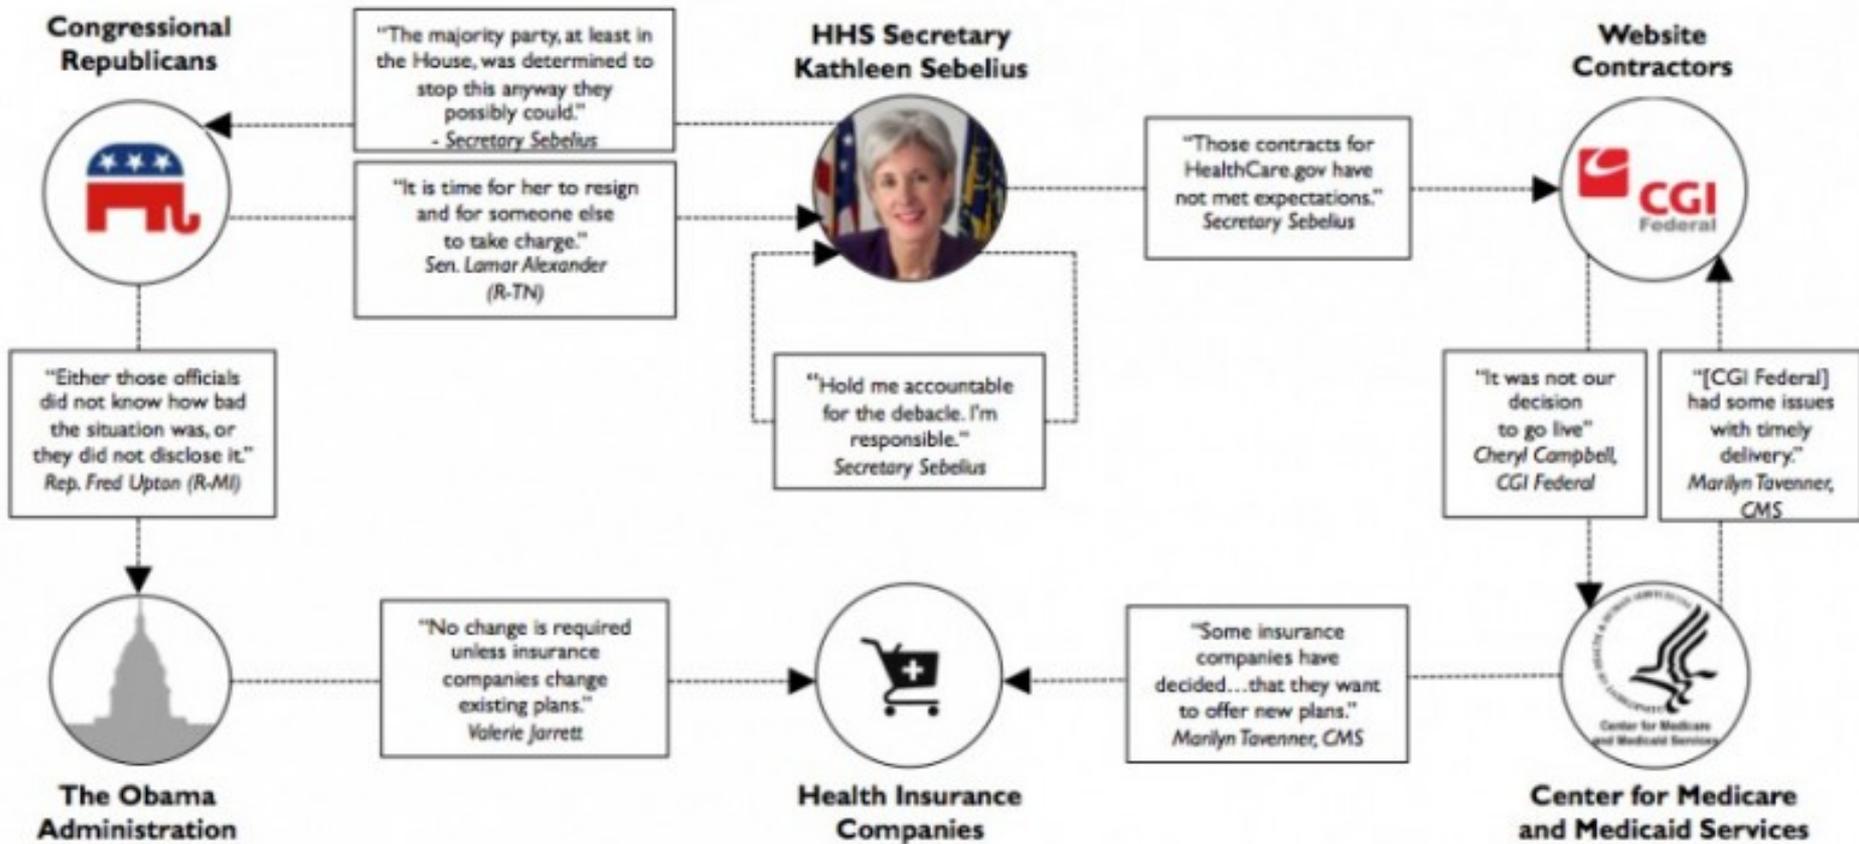

**Washington (CNN)** -- The President's healthcare sign-up web page was supposed to handle tens of thousands of people at once. But in a trial run days before its launch, just a few hundred users flatlined the site.

Despite the problems, federal health officials pushed aside the crash cart and rolled out [HealthCare.gov](#) on October 1 as planned, [The Washington Post](#) reported.

The result? The website crashed shortly after midnight as a couple thousand people tried to start the process, two people familiar with the project told the Post.

« While I was there working in marketing, I started doing more and more engineering at night on simple ideas that helped me learn how to program (**I don't have any formal CS degree or training**) »

« We spent 1 week prototyping a version that focused solely on photos.

It was pretty awful. So we went back to creating a native version of Burbn. We actually got an entire version of Burbn done as an iPhone app, but it felt cluttered, and overrun with features. It was really difficult to decide to start from scratch, but we went out on a limb, and basically cut everything in the Burbn app except for its photo, comment, and like capabilities. What remained was Instagram. »

# Software Engineering

---

The production of operational software satisfying defined standards of quality...

... includes programming, but is more than programming!

The five components of Software Engineering [Meyer]:

- **Describe:** *requirements, design, specification, documentation...*
- **Implement:** *modeling, programming*
- **Assess:** *testing and other V&V techniques*
- **Manage:** *plans, schedules, communication, reviews*
- **Operate:** *deployment, installation...*

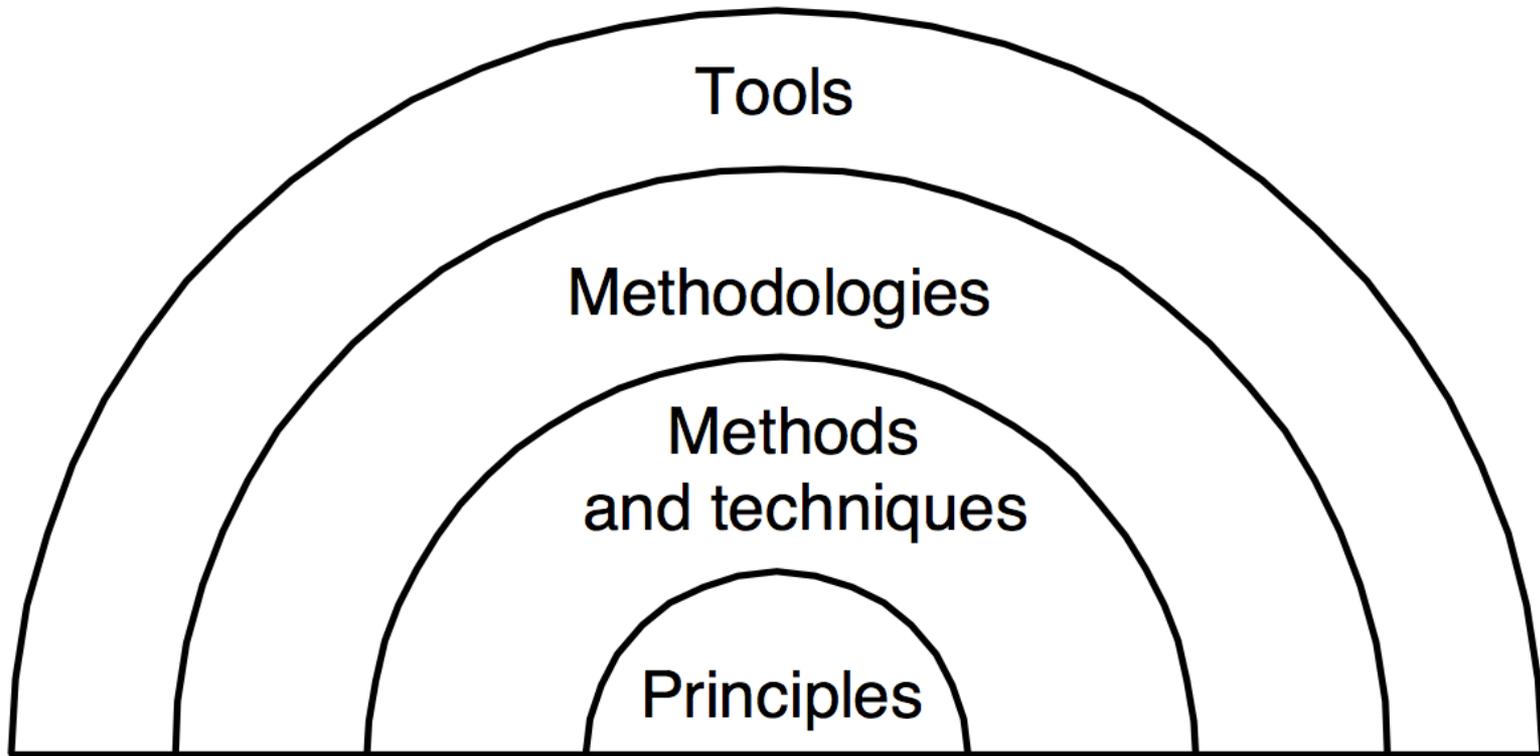

# Software Engineering: definition

---

- is a **profession** dedicated to designing, implementing, and modifying software so that it is of higher quality, more affordable, maintainable, and faster to build.
- is a **systematic approach** to the analysis, design, assessment, implementation, test, maintenance and re-engineering of a software by applying engineering to the software.
- first appeared in the 1968 NATO Software Engineering Conference (to provoke thought regarding the perceived "software crisis" at the time).

- Le client
  - « J'avais demandé une version graphique... Et on ne peut même pas sauvegarder une partie. Ou lire des parties. Et vous n'avez pas pris en compte la règle du pat! »
- Rappel (spécification du client à l'origine)
  - « Développer un jeu d'échecs pour jouer tout seul »

# Restons calme. Analyse

- « **J'avais demandé une version graphique...**
  - Mauvaise analyse des besoins initiaux (cahier des charges)
  - Impact sur le code non négligeable: il va très certainement falloir adapter le code existant (en plus d'implémenter de nouvelles fonctionnalités)
    - Affichage graphique des pièces et des cases
    - Écouter des « évènements » et réagir en conséquence
    - Interdire des interactions (sur des coups impossibles)
  - Mais est-ce que le code est fait pour?

# Retour au code

```
public void displayBoard() {  
  
    for (int i = 0; i < 8; i++) {  
        for (int j = 0; j < 8; j++) {

                System.out.println('R');  
            }  
            // ...  
            else { // square without piece  
                System.out.println('.');

The screenshot displays a chess software interface. On the left is a chessboard with pieces. On the right, there's a panel with a timer showing 0:00:55 and 0:00:41, a 'fritz' logo, and game details: 'Chesslib's PowerBook 2005', 'Level=10\*av. 26.06.2006'. Below this is a move list: '1.e4 0 c5 0 2.f3 5 e6 0 3.d4 2 cxd4 0 4.fxd4 3 a6 0 5.fxc3 3 fxc6 0 6.fxe3 2 g7 0 7.gd2 3 f5 0 8.f3 2 f4 0 9.a3 3 f7 0 10.g4 4 h6 0 11.0-0-0 12 b5 0 13.fxb1 10 b4 -0.50/10 16 13.axb4 0'. A graph shows '100ep' vs '9ep' with a peak at move 12. Below the graph is a list of moves and engine evaluations: 'z [-0.28] depth: 8/26 00:00:01 823kN', '13...fxb4 14.fg2 z b8 15.h4 d5 16.g5 fg8 17.exd5 fxd5 18.fxc', 'z [-0.22] depth: 9/30 00:00:02 2268kN', 'z [-0.28] depth: 10/33 00:00:09 8528kN'. At the bottom is a menu bar with icons for EXIT, NEW, WATCH, MOVE NOW, HINT, RATED, HANDICAP, SEARCH, MOVES, GAME, LEVELS, BOOK, COACH, SETUP, DATABASE, HELP, and MINIMIZE.
